

LunaFix

Luna Fix Aluminum internal corner profile is used to prevent water penetration in the wall joints of the bathtub or shower unit in the inner corner joints of the ceramic surfaces and to provide an aesthetic look for the poor appearance in the joint area.

Aluminum internal corner profile, besides being used on the ceramic surface, is generally used as a protection between countertop and wall in kitchen. By means of it, deformations on the surface such as swelling and cracking is prevented by avoiding liquid penetration to the edges. At the same time, it provides a complementary look to the whole decoration.

Luna Fix Aluminum internal corner profile fits any decorations with different color and surface options.
